

An English translation of only the "Claims" portion of Scheller's 1916 patent follows.

1. Wireless course indicator and telegraph with two directional transmitters at an angle, so arranged that coupling coils are applied, and these are alternately switched on and can be rotated with respect to each other.

2. Modification of the course indicator according to Claim 1, in such a manner that the two alternately switched coupling coils are arranged to be rotatable in common.

3. Wireless course indicator and telegraph according to Claims 1 and 2, arranged in such a manner that the two coupling coils may be rotated both with respect to each other as well as in common, to the end that both the sharpness and the direction of the equisignal courses may be adjusted.
